

Safety & Environment Moment (S&E Moment)

Script 14 – Basic Terminologies used in Environmental Management

Cherished listeners, good morning and welcome to the S&E Moment.

Today, we begin a new episode on “Terminologies used in Environmental Management”. We start off by looking at the term “Environment”.

The Environment is generally defined as our surroundings. For the purpose of this S&E Moment, we shall explain and distinguish between the “Natural Environment” and “Built Environment”.

The Natural Environment, also generally referred to as the “Environment” consist of the air, land and water that support human, plants and animals that live on earth. Activities that affect or impact on air, land and water are what Environmental Management Professionals are concerned about. What is your occupation? or What business are you engaged in? Take a moment to think about how your activities or operations affect or impact on air, land and water.

Please visit the Ghana Health Service COVID-19 website for further information and updates on ways to prevent the spread of the disease.
