

Safety & Environment Moment (S&E Moment)

Script 15 – Built Environment

Good morning and welcome to the S&E Moment. We are continuing our episode on Terminologies used in Environmental Management. In our previous S&E Moment, we looked at the National Environment, and today, we are discussing Built Environment.

The “Built Environment” is sometimes referred to as “Man-Made Environment”. Man-made environment because it encompasses the places and spaces created and modified by man, and includes buildings, parks, transportation systems and so on. It is important to note that Built Environment is part of the natural environment, and can be described as subset of the natural environment against the background that man has created built environment on land which is part of the natural environment.

Are you a Civil Engineer, Urban Planner, Architect, Contractor, etc. involved in designing of civil infrastructure? Please take a moment today as part of your S&E Moment to assess and evaluate potential impacts of your designs on the natural environment and modify your designs to be friendly to the environment.

Please visit the Ghana Health Service COVID-19 website for further information and updates on ways to prevent the spread of the disease.
